LIPOSURE

WHAT IT IS:

- Natural fiber that supports healthy cholesterol

WHY YOU NEED IT:

- Important for patients with high cholesterol
- Targets patients with hormone-related hair loss in men and women
- Great for patients with symptoms of an enlarged prostate
- Good for patients looking for a powerful Immune booster

HOW IT HELPS:

LipoSure is a natural supplement that contains a natural fiber, beta-sitosterol, that is found in fruits and vegetables. Clinical research has proven that medicinal doses of beta-sitosterol support healthy cholesterol levels without the side effects of prescription medications such as the “statin” drugs.

Blood cholesterol comes from two sources: cholesterol that which is made in the body (liver) and cholesterol that is in the food we eat. To lower blood cholesterol levels, you either need to reduce production of cholesterol by the liver or block some of the cholesterol in the diet from being absorbed.

In the lining of the intestine there are microscopic gates that allow specific nutrients to be absorbed. There are gates for cholesterol, proteins, vitamins, and many other nutrients. These gates open during the digestion of a meal to allow the nutrition to enter the blood stream.

LipoSure contains a cholesterol look-a-like molecule that blocks the “cholesterol gate” and reduces cholesterol from the diet from being absorbed. By doing so, LipoSure can support healthy blood cholesterol levels by preventing cholesterol in the gut from getting into the blood.

These statements have not been evaluated by the Food and Drug Administration.
These products are not intended to diagnose, treat, cure or prevent any disease.
Always consult your doctor before taking any of these products.

Bile from the liver helps us digest the fat that we eat. One of the main ingredients of bile is a type of cholesterol. This cholesterol also gets mixed into the food that we eat while it is getting digested. LipoSure also blocks this liver-made cholesterol from getting completely absorbed, and this effect further supports healthy cholesterol blood levels.

For men and women who are balding, LipoSure contains ingredients that can help support hormone-related hair loss. LipoSure can be used as part of a comprehensive natural hair loss prevention and restoration with our other hair support supplements which include HSN Pro, Goldilocks, Apple Diem and Scalp Sprout.

Balding in men and women is often caused by the male hormones, testosterone and DHT, attacking the hair root. This causes the hair to become thinner over time. Without treatment, the hair follicle eventually shrivels up and stops making more hair, which causes balding in men and some women.

LipoSure blocks testosterone and DHT from attacking the hair follicle. This action helps support healthy hair follicles. Healthy follicles means healthy hair.

This same blocking effect also helps LipoSure work for patients with symptoms of an enlarged prostate. As the prostate gets bigger, it prevents the bladder from working normally. Prostates get bigger for many reasons as men age, chief among them is a poor diet and toxic buildup inside the prostate. As men age, they may suffer from the symptoms of an enlarged prostate. These symptoms include weak urinary stream, post-void dribbling, frequent urination, night-time urination, and incontinence.

In this setting, testosterone may compound the problem of an enlarged prostate and LipoSure's blocking action provides welcome support for healthy prostate tissue.

By relieving this pressure, the prostate can work better and the symptoms of an enlarged prostate (weak urinary stream, post-void dribbling, frequent urination, night-time urination, and incontinence) can improve without the side effects of prescription medication.

Endurance athletes (such as triathletes and marathoners) put so much energy into their sport that not much is left for other important functions such as the immune system. Endurance training also causes a lot of wear and tear due to a buildup of inflammation. LipoSure has been shown to support healthy immune function and inflammation levels in endurance athletes.

Usual Dosage: Take one to two capsules twice daily, preferably on an empty stomach 30 minutes before meals.
