## Support for Healthy Blood Sugar and Metabolism

### WHAT IT IS:

- A natural, synergistic formula to maintain balanced blood sugar levels

### WHY YOU NEED IT:

- Important for patients with Diabetes, Insulin Resistance, and Elevated blood sugar levels
- Good for patients trying to lose weight, build muscle
- Targets patients who want a natural solution to blood sugar regulation
- Components have been clinically tested
- Non-drug, well tolerated

### HOW IT HELPS:

High blood sugar and elevated insulin levels are two of the fastest growing health problems in America. Over time, even slightly elevated blood sugar can rot out the body, just like sugar can rot your teeth.

More than 60% of every health care dollar spent annually in the United States is on Diabetes related illnesses.

High blood sugar is so dangerous that expert panels continue to lower the 'normal' blood sugar levels. In recent years, recommended healthy blood sugar levels have been lowered from 140 to 95 because clinical research continues to show the damage that can occur with slight, but persistent elevations in blood sugar.

Insulin is the hormone made by the pancreas that shuttles sugar molecules out of the blood and into cells. Once all of the active cells (like brain and muscle) have enough sugar, insulin then drives excess sugar into fat cells. As a result, insulin is the body's second most powerful fat-building hormone after leptin. When blood insulin levels are over 10, fat-building goes into hyper-drive, making weight loss extremely difficult.

ShugaLo contains a blend of carefully selected ingredients that work together to support healthy blood sugar and insulin levels. ShugaLo is designed to target all aspects of healthy blood sugar utilization, cellular metabolism, and insulin regulation.

Many prescription diabetic drugs do the same thing, but with unwanted (or unknown) side effects. ShugaLo gets the job done, but without any of the problems seen with pharmaceuticals. ShugaLo is important for patients with concerns for their blood sugar levels, insulin levels, insulin sensitivity, fat metabolism, and their need to lose weight and build muscle.

**Usual Dosage:** Take two capsule, once or twice daily depending on blood sugar and insulin testing. May be taken with or without food.
