VascuTone

Support for Vascular Health

WHAT IT IS:

- Natural supplement that boosts Nitric Oxide blood levels

WHY YOU NEED IT:

- Supports normal, healthy blood pressure and blood flow
- Good for patients with High Blood Pressure
- Targets men with Erectile Dysfunction
- Important for patients with atherosclerosis and heart disease
- Necessary for patients on acid-blockers (Prilosec, Nexium, Prevacid, Protonix, Aciphex, Tagamet, Zantac, Pepcid, etc.)
- Safe, natural and well tolerated

HOW IT HELPS:

You may never have heard of 'Nitric Oxide' gas (no, it's not the laughing gas at Dentists' offices...that's Nitrous Oxide), but your body makes some every second.

Nitric Oxide is a gas constantly produced by the cells that line our arteries. This gas is immediately used to open the arteries and improve blood flow. When Nitric Oxide levels go up inside the arteries, blood pressure goes down. Nitric Oxide gas can also protect the arteries from cholesterol deposits and the formation of dangerous plaque.

Our bodies make lots of Nitric Oxide when we are young, but as we age, the production of Nitric Oxide declines. For example, most men will make about half the Nitric Oxide at 40 years of age than they will when they are 20 years old.

How do men know their Nitric Oxide is declining? With their built-in 'dipstick.'

Remember, Nitric Oxide dilates arteries, and this includes the arteries in the penis that are necessary for erections. Less Nitric Oxide production means a less firm erection. Many men will admit that their erections at 40 are not as hard as they were at 18.

All of the 'Viagra-type' drugs work by increasing penile Nitric Oxide.

But Viagra isn't going to treat your high blood pressure, cholesterol plaque, or heart disease. VascuTone works to support healthy blood flow, healthy blood pressure, healthy arteries in both sexes...and healthy erections in men.

Usual Dosage: Dissolve one scoop of VascuTone in water, twice daily, on an empty stomach.

Then...watch...as blood pressure goes down, and 'dipsticks' go up.
